

INTERNATIONAL MAGAZINE TEST RESULTS 2007 NAISH BOXER SLE

Technology Driven. Rider Proven.

WORLD FAVORITE

"...with lighter bar pressure than the Naish SLE kites of last year, the Boxer SLE is suited for the beginner to intermediate, but the kite delivers much more. Even advanced riders will have fun with this kite."

"(The Boxer SLE) offers a wide wind range and with a change in the bar set-up goes from big depower to light bar pressure very easily. It has good material, good workmanship, and a very functional bar system."

"The Boxer SLE shows the best price and performance combination of any kite we tested."

Aug. 2006, pg. 32-33

"This is a totally new kite that we discovered, and you can notice Naish's know-how from the beginning; not everyone can be a leader!

"Naish is the only brand to offer the solution of riding a pulley or a classic 4-line bar. It turns well, accelerates quick, has a good wind range and won't disappoint when jumping."

"The Boxer SLE is a huge success in hitting its target. We are confident to say that it is certainly the kite that will fit your needs the best."

Oct./Nov. 2006, pg. 61

"The 2007 Boxer SLE has been engineered to master most styles of riding. The new Boxer is now more than just a user friendly kite."

Oct./Nov. 2006, pg. 100

"Naish designed this kite for 'all-terrain riders and just about any skill level."

"...well-explained bar settings give you quick options to go from max depower to minimal bar-pressure. Converting the 2:1, with pulley, to 1:1 takes less than two minutes."

"Even with its fast turning, the kite doesn't feel twitchy. We were stoked on the range the Boxer SLE offers..."

"Based on previous Naish Boxers, one might be tempted to label the Boxer SLE as a beginner kite. The performance potential suggests otherwise. Riders of all abilities will be able to find the setting suited to their style of riding and local conditions."

Fall 2006, pg. 56

"...the Boxer (SLE) is transformed into a kite that feels very much like a classic kite, yet still has the depower of a bow. It is an impressive feat and after we flew the kite on the beach, we believed the hype."

"In the air it is very stable and depending on the set-up, it can give the rider as much feedback or as little as they want."

Sept./Oct. 2006, pg. 97

"The construction and finish (of the Boxer SLE) is perfect. Naish is innovative in 2007 with the 2:1 and 1:1 on the SLE bar. It has a very big wind range and when jumping, it accelerates out of the water quickly and takes you high."

Oct./Nov. 2006, pg. 32
